

● Hypertai Spray Powder

Spray Powder is a high-performance and high-quality anti-offset powder designed to prevent ink set-off during printing processes. By applying a fine layer of powder between sheets, with natural raw materials, Hypertai ensures that freshly printed ink does not transfer to adjacent sheets, maintaining the quality of prints and preventing smudging. With its proven track record in preventing ink set-off, Hypertai Spray Powder is a valuable tool for companies looking to optimize their printing processes and maintain high print quality.

● Sponge

VISKOVITA BRAND-Germany: No.1 Sponge used on offset printing presses. A sponge is a special cleaning tool for printing plates and printing masters. It is pure fiber products, high quality, flexible, durable, and solvent-resistant. Each piece is sealed in a plastic bag, packed individually, compressed, and moisture-proof, making storage convenient. The sponge has strong water absorption and high elongation force.

● Blanket

Closed-cell compressible layer design enables quicker rebounds with less sinking, therefore providing overall improved blanket durability. Easy to clean with high resistance against paper indentations, with color light blue.

● Fountain Solution

Fountain solution is a water-based mixture used in offset printing to keep non-image areas of the printing plate free from ink. It maintains the balance between ink and water, preventing excessive emulsification and ensuring sharp, vibrant prints.

● Plate cleaner

This is a plate cleaner that is compatible with both UV and oil-based inks. It effectively removes scratches and dirt from CTP plates, such as untreated plates. It physically removes ink stains that have penetrated the sand surface of the non-image areas of the plate.

● Calcium Remover

Regular use is normally once a week to prevent calcium buildup on ink rollers, maintaining the production performance of the rollers. It is easy to apply, convenient tube format. It can extend the lifespan of rollers, reducing downtime for roller replacement. Eliminates all calcium from inking and dampening rollers. Restores good ink transfer ability to the inking rollers and helps keep rubber rollers in optimum condition.

● Press Wash

Essential cleaning agents used in offset printing to remove ink, dust, and debris from the press components, particularly the blankets and rollers. Regular cleaning of the blankets and press parts is crucial for maintaining optimal print quality, preventing ink contamination, and extending the life of press equipment.
